Streamlined Energy & Carbon Reporting (SECR) 2020

This report comprises the SECR report for GANT UK Limited operations for the fiscal year 2020.

The report includes energy consumption in offices including showrooms, stores and road travel and its related green-house-gas emissions. These emissions reflect the scope 1 and scope 2 emissions according to the Greenhouse Gas protocol. Since this is the first year GANT UK reports according to SECR figures, data for previous years has not been included.

Management approach

GANT UK Limited is a subsidiary in the GANT Group and is included in the Group sustainability strategy and targets. The group is committed to:

- decrease its climate footprint by 30% throughout all operations by 2030
- implement 50% renewable energy across our own operations by 2025 and 100% renewable energy by 2030

In 2020, GANT UK Limited sourced 100% renewable energy in offices and showrooms.

Energy use

Energy consumption includes purchased electricity in offices, showrooms and stores. Fuel consumption during road travel is also included. The total energy use for GANT UK Limited was 1,024,993.5 kWh for fiscal year 2020.

Energy consumption	FY2020 (kWh)
Offices	150,182.0
Stores	851,720.3
Road travel	23,091.1
Total	1,024,993.5

Directors' report *(continued)*

Greenhouse gas emissions

The Greenhouse gas emissions, related to the above reported energy consumption, was 239.3 MT of CO₂-equivalents. Scope 1 includes emissions that occur due to the combustion of fuel for road travel. Scope 2 emissions relate to the indirect emissions that occur due to the energy that is consumed in offices, showrooms and stores. For scope 2 emissions, a location-based method was applied.

GHG-emissions	FY2020 (tCO ₂ e)
Scope 1	5.7
Scope 2 (location based)	233.6
Total	239.3

Intensity ratio

The chosen metric to report the intensity ratio is £100 000 of revenue.

GHG emissions - Intensity ratio	FY2020 (tCO ₂ e / £100,000 revenue)
Total scope 1 and scope 2	0.5

Total revenue during 2020 was £50,271,562.

Methodology

The methodology of Greenhouse gas protocol corporate standard was used to calculate the emissions in this report.

Scope 1 emissions have been calculated based on the range travelled by road, converted into CO₂-equivalents using UK Government conversion factors from the Department for Business, Energy & Industrial Strategy. Conversion factors for an average car with unknown fuel have been applied.

For scope 2 emissions, a location-based method was applied by using a conversion factor for UK electricity from the Department for Business, Energy & Industrial Strategy. The location-based emissions reflect the average emission of the grid where the energy consumption occurs.

The data in this SECR report has not been externally assured.
