# Strategic report (continued)

**Communities and Environment:**

At a Corporate level, DXC has set a number of environmental targets to reduce the carbon, waste and water impacts the organisation has. These goals are embedded into the company strategy and the approaches being taken.

The Company has implemented a Virtual First programme, which allows employees to embrace a more flexible and agile work experience and move to a largely virtual-first workforce. These programmes will reduce DXC's GHG emissions, overall energy consumption, and the dependence on employee daily work commutes and business travel.

Electricity purchased by the Company, where in direct control, is 100% from verified renewable electricity sources, including across all data centre operations.

IT asset disposal, including servers, computers, laptops and screens from Company and customer operations are reused where possible for a second life. Some of these items are distributed to schools and charities.

The Company is proud to invest in local communities including innovative technology solutions, youth and adult educational initiatives and volunteerism by the Company's employees on a broad range of projects.

The DXC group publishes an annual corporate responsibility report where detailed companywide environmental commitments, initiatives and key performance indicators can be found. A copy of the report is available under website:
(http://www.dxc.technology/cr/ds/88734-corporate_responsibility_report_archives).
